Copyright © tutorialspoint.com

Filter pattern or Criteria pattern is a design pattern that enables developers to filter a set of objects using different criteria and chaining them in a decoupled way through logical operations. This type of design pattern comes under structural pattern as this pattern combines multiple criteria to obtain single criteria.

Implementation

We're going to create a *Person* object, *Criteria* interface and concrete classes implementing this interface to filter list of *Person* objects. *CriteriaPatternDemo*, our demo class uses *Criteria* objects to filter List of *Person* objects based on various criteria and their combinations.

Step 1

Create a class on which criteria is to be applied.

Person.java

```
public class Person {
    private String name;
    private String gender;
    private String maritalStatus;

public Person(String name, String gender, String maritalStatus){
        this.name = name;
        this.gender = gender;
        this.maritalStatus = maritalStatus;
}

public String getName() {
    return name;
}
public String getGender() {
```

```
return gender;
}
public String getMaritalStatus() {
   return maritalStatus;
}
```

Step 2

Create an interface for Criteria.

Criteria.java

```
import java.util.List;
public interface Criteria {
    public List<Person> meetCriteria(List<Person> persons);
}
```

Step 3

Create concrete classes implementing the Criteria interface.

CriteriaMale.java

```
import java.util.ArrayList;
import java.util.List;

public class CriteriaMale implements Criteria {

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> malePersons = new ArrayList<Person>();

        for (Person person : persons) {
            if(person.getGender().equalsIgnoreCase("MALE")){
                 malePersons.add(person);
            }
        }
        return malePersons;
    }
}
```

CriteriaFemale.java

```
import java.util.ArrayList;
import java.util.List;

public class CriteriaFemale implements Criteria {

    @Override
    public List<Person> meetCriteria(List<Person> persons) {
        List<Person> femalePersons = new ArrayList<Person>();

        for (Person person : persons) {
            if(person.getGender().equalsIgnoreCase("FEMALE")){
                 femalePersons.add(person);
            }
        }
        return femalePersons;
    }
}
```

CriteriaSingle.java

```
import java.util.ArrayList;
```

AndCriteria.java

```
import java.util.List;
public class AndCriteria implements Criteria {
    private Criteria criteria;
    private Criteria otherCriteria;

public AndCriteria(Criteria criteria, Criteria otherCriteria) {
        this.criteria = criteria;
        this.otherCriteria = otherCriteria;
    }

@Override
public List<Person> meetCriteria(List<Person> persons) {
    List<Person> firstCriteriaPersons = criteria.meetCriteria(persons);
    return otherCriteria.meetCriteria(firstCriteriaPersons);
}
```

OrCriteria.java

```
import java.util.List;
public class OrCriteria implements Criteria {
   private Criteria criteria;
   private Criteria otherCriteria;
   public OrCriteria(Criteria criteria, Criteria otherCriteria) {
      this.criteria = criteria;
      this.otherCriteria = otherCriteria;
   @Override
   public List<Person> meetCriteria(List<Person> persons) {
      List<Person> firstCriteriaItems = criteria.meetCriteria(persons);
      List<Person> otherCriteriaItems = otherCriteria.meetCriteria(persons);
      for (Person person : otherCriteriaItems) {
         if(!firstCriteriaItems.contains(person)){
            firstCriteriaItems.add(person);
      return firstCriteriaItems;
   }
}
```

Step4

Use different Criteria and their combination to filter out persons.

CriteriaPatternDemo.java

```
public class CriteriaPatternDemo {
   public static void main(String[] args) {
       List<Person> persons = new ArrayList<Person>();
       persons.add(new Person("Robert", "Male", "Single"));
persons.add(new Person("John", "Male", "Married"));
persons.add(new Person("Laura", "Female", "Married"));
persons.add(new Person("Diana", "Female", "Single"));
persons.add(new Person("Mike", "Male", "Single"));
       persons.add(new Person("Bobby", "Male", "Single"));
       Criteria male = new CriteriaMale();
       Criteria female = new CriteriaFemale();
       Criteria single = new CriteriaSingle();
       Criteria singleMale = new AndCriteria(single, male);
       Criteria singleOrFemale = new OrCriteria(single, female);
       System.out.println("Males: ");
       printPersons(male.meetCriteria(persons));
       System.out.println("\nFemales: ");
       printPersons(female.meetCriteria(persons));
       System.out.println("\nSingle Males: ");
       printPersons(singleMale.meetCriteria(persons));
       System.out.println("\nSingle Or Females: ");
       printPersons(singleOrFemale.meetCriteria(persons));
   public static void printPersons(List<Person> persons){
       for (Person person : persons) {
           System.out.println("Person : [ Name : " + person.getName() + ", Gender : " +
person.getGender() + ", Marital Status : " + person.getMaritalStatus() + " ]");
       }
   }
}
```

Step 5

Verify the output.

```
Males:
Person : [ Name : Robert, Gender : Male, Marital Status : Single ]
Person : [ Name : John, Gender : Male, Marital Status : Married ]
Person : [ Name : Mike, Gender : Male, Marital Status : Single ]
Person : [ Name : Bobby, Gender : Male, Marital Status : Single ]
Females:
Person : [ Name : Laura, Gender : Female, Marital Status : Married ]
Person : [ Name : Diana, Gender : Female, Marital Status : Single ]
Single Males:
Person : [ Name : Robert, Gender : Male, Marital Status : Single ]
Person : [ Name : Mike, Gender : Male, Marital Status : Single ]
Person : [ Name : Bobby, Gender : Male, Marital Status : Single ]
Single Or Females:
Person : [ Name : Robert, Gender : Male, Marital Status : Single ]
Person : [ Name : Diana, Gender : Female, Marital Status : Single ]
Person : [ Name : Mike, Gender : Male, Marital Status : Single ]
```

Person : [Name : Bobby, Gender : Male, Marital Status : Single]
Person : [Name : Laura, Gender : Female, Marital Status : Married]
